

Guess what?

Tech Spotlight

You may be wondering how Mojo Soup handles its business across the myriad of Microsoft applications...well this month we will provide some insights on how we get the best use out of some applications with a hope we can pass on some value to you, our valued Customers.

1. Comms

1. We have embraced Teams like most businesses out there, and over time, it has become more and more efficient and feature rich. We have some cool automation to create Teams channels to help us manage projects and centralise comms with Customers, but we also manage our internal comms, files, and most importantly 'Praise' within Teams.
2. And because we have some Brilliant Minds at Mojo Soup, we have some pretty cool custom features and automations in Teams to help us identify our Mojo Soupian locations day to day, book our shared car park, or even place votes on Dad Jokes.
3. Of course we use outlook for emails, and have 'Bookings' included in our email signature to support external users and Customers finding available times with us to book in meetings - give it a try!

2. Projects

1. As a Microsoft Partner, we really do use the same tools we provide to Customers when it comes to Project Management. We transitioned from Project Online to Project for the Web and Project Power App about 18 months ago.
2. We manage our schedules, contracts, risks, issues, decisions, and change all within the Project environment. We also produce status reports for Customers and manage our own internal Portfolio Governance from within the Project Power App.
3. Azure DevOps has been our core technical delivery application for some time now, providing both our technical team and customers access to develop user stories, tasks, and user acceptance criteria across sprints and releases.
4. We tie all of the above together with Power BI reports to provide insights to our team's capacity and utilisation across different demand streams (internal and external) as well as to help us review our performance across specific business goals and KPIs.
5. We also use some pretty cool tools like 'Mural' to facilitate workshops, retrospectives, and meetings that require multiple inputs, 'Balsamiq' to develop wireframes, and 'Canva' for our more creative team members to produce beautiful presentations and materials.

3. Commercially

1. You might be surprised to hear we don't use Microsoft products exclusively, but it is true, we do step out of the box occasionally...we use Capsule CRM to manage our opportunities, Xero to manage our accounts, and Harvest to track our time.

If you would like to learn more about any of the solutions mentioned above, reach out to one of our team members for advice or a short demo; we love passing on knowledge and tech tips!

Soupian Du Jour

Madison has recently joined us as our M365 Consultant, bringing her expertise to the table.

What's your greatest passion outside of work?

Food, Travel, Fitness.

What is something we need to know about you?

I will always be eager to learn or be challenged and when I'm not at work I am working out in a gym to clear my mind and stay healthy.

Who is your hero?

Tia-Clair Toomey is an Australian weightlifter and CrossFit Games athlete who has won gold at the Commonwealth Games and six consecutive titles at the CrossFit Games (the most title wins in the history of the sport).
